

In this survey I would take moment talk about the App called Aaj Mobile news app.

Never work on iPhone. Working on iPad. Why support staff is sleeping. All on review giving one star even this app does not deserve a single star. Without give one star I cannot review.

Seriously its Waste to download this app. All the content is covered by the app. In between add start and you have to wait for 10 sec or more to search the X button. Seriously nothing to see with the adds half-truth is worst then lies. after updates the app has become buggy and doesn't work quite well. Too many ads and live tv doesn't work most of the time. I am deleting this app after writing this review. Please do not waste your time in this app. Very poorly designed and developed application. At least on iPhone it does not work well. Not sure about Android version. In app video and advertisements make it very difficult to read news. There is a lot white space below the news and I can't see the compete news. I would suggest making it very simple and light. This app does not reflect the level of AajTak.

On upon the review there was really good experiences while using the this app. The few people I have made them download the and have them used it. I really like to watch Aajtak for Indian news. Now i can watch live tv video on my iPhone and smart tv. Good app looking for English version headlines today. Notifications deep linking not working, on tap of notifications it goes to that detail page and suddenly come back and loads news list page

In this app there is lots thing need to get work specially fixing the bugs, and the way it should operate in the iPhone, sometime for this app Android work the best then iPhones. Some its doesn't have an English language, and that's main and major issue with this app, In the USA not

lot people know how to Speak or some people don't understand the Hindi, even though the app have the subtitles but its doesn't work all the time.
